

Apprenticeship Case Study: **ELECTRICAL ENGINEERING**

Name

Darren Matthews
Senior E&I Atex Engineer -
ABB/BP (Algeria)

TTE Qualification

Advanced Apprenticeship in
Electrical Engineering

“ In my third year at TTE I got sponsored by Corus for an Advanced Modern Apprenticeship. This was a fantastic opening for me and I stayed at Corus for three years after my apprenticeship finished before I decided to leave and start working offshore in the North Sea. ”

Career To Date

My first job offshore was working on the hook up of a 5.2MW wind turbine in the North Sea. After a year I left and went to work for Shell in Russia as an Ex Inspector.

After that I moved to PDO/Petrofac in Oman and since then I have travelled further around the world working as an electrical inspector in Croatia, Ghana and, currently, Algeria.

My current job is working for ABB/BP. I am in charge of a team of Expats and local labour carrying out detailed inspections on various electrical and instrumentation equipment on a 3 Train Gas Plant. We also carry out any remedial works that are required to pass the equipment.
